Subject: Application for Application Security Analyst / Penetration Tester / Digital Forensics Analyst

Respected Hiring Manager,

I am writing to express my interest in the Application Security Analyst, Penetration Tester, or Digital Forensics Analyst opportunities within your organization.

With a hands-on VAPT internship experience, cybersecurity certifications, and practical exposure to security assessments and digital investigations, I am eager to contribute my technical skills to your security team.

I hold a Bachelor of Science in Digital Forensics from the Indian School of Ethical Hacking (ISOEH), under Maulana Abul Kalam Azad University of Technology (MAKAUT), where I developed a strong foundation in cybersecurity analysis, digital forensics, incident response, and security operations. I also completed a VAPT Internship at ISOAH Data Securities Pvt. Ltd., Kolkata, where I performed black-box and grey-box security assessments of web applications and REST APIs, conducted cloud and administrative infrastructure audits, identified security weaknesses, and prepared detailed technical remediation reports.

Through my academic training, professional internship, and hands-on cybersecurity simulations, I have gained practical experience in:

- Conducting black-box and grey-box VAPT of web applications, REST APIs, and network endpoints using Burp Suite and Nmap, including the identification and validation of OWASP Top 10 vulnerabilities.
- Performing Microsoft 365 and administrative infrastructure security reviews to identify privilege exposures, access-control weaknesses, and security misconfigurations.
- Analyzing Nessus and OpenVAS vulnerability assessment results, developing functional Proof-of-Concepts (PoCs), and preparing technical remediation reports with CVSS-based risk assessments.
- Investigating web activity logs to identify suspicious user behavior during a simulated cyber breach as part of the Deloitte Australia Cyber Job Simulation.
- Identifying phishing threats and developing security-awareness recommendations during the Mastercard Cybersecurity Job Simulation.

My technical projects have further strengthened my practical capabilities in digital forensics, application security, phishing detection, and security automation, including:

- Developed a web-based Digital Forensic Learning Tool (Forensic Analyzer) supporting cryptographic hashing and encoding algorithms.
- Engineered an AI-Powered Phishing Email Detector capable of analyzing email headers and message bodies for malicious indicators and deceptive patterns.
- Developed the Cyber Security Multi-Tool Launcher (CMTL), integrating network reconnaissance, vulnerability assessment, and digital forensics modules for security testing and analysis.

My core technical skills include:

- Vulnerability Assessment and Penetration Testing (VAPT, WAPT, API Security)
- Digital Forensics, Evidence Handling, and Disk/Memory Artifact Analysis
- Network Security, Traffic Analysis, and Log Investigation
- Python, Bash, and Shell Scripting for Security Automation
- Burp Suite, OWASP ZAP, Nmap, Nessus, OpenVAS, Metasploit, Wireshark, and Nikto
- FTK Imager, Autopsy, Magnet AXIOM, Cellebrite, and Oxygen Forensics

I have also earned certifications and training in:

- CEH v13 AI (Certified Ethical Hacker)
- CHFI v11 (Certified Computer Hacking Forensic Investigator)
- CRTOM | CPPS | CTIGA | CCEP
- Core Python Programming Course
- Try Hack Me (Top 5%)

Beyond formal coursework and professional training, I actively participate in cybersecurity competitions and Capture The Flag (CTF) events, including Cyraksha, Infocom Hackstar, Cryptoquest, and MAKAUT CTF. These experiences have strengthened my analytical thinking, problem-solving abilities, threat-hunting mindset, and practical approach to cybersecurity challenges.

With hands-on VAPT experience, a strong foundation in digital forensics, and a continuous interest in application and offensive security, I am eager to contribute to identifying security risks, strengthening security controls, protecting digital assets, and supporting secure business operations. I would welcome the opportunity to apply my technical skills, certifications, and passion for cybersecurity within your organization and contribute meaningfully to your security team.

I would welcome the opportunity to discuss how my technical skills, certifications, and passion for cybersecurity can contribute to your organization. Thank you for your time and consideration. I look forward to hearing from you.

Sincerely,

Sayani Maity
